PALMO200N C7 is a retractable entirely vanishing bollard on the level of the soil. The semi-automatic bollard has a gas spring that it makes easier the lift of the bollard, and thanks to a release key it is possible to arrest the bollard in a low or high position. This bollard has been designed in order to keep the energy generated from an impact with a vehicle with a low speed.

The bollard is composed by:

- Hot galvanized formwork , supporting brackets and aluminium anti-slippery platform.
- Mechanical pipe, hot galvanized and painted, with anti-slippery head.
- retro-reflective band with high brightness for an high visibility during night hours
- Release key

There are also available bollards with external different diameters:

PALMO140 diameter 140 mm / PALMO200 diameter 194 mm.

SEMI-AUTOMATIC BOLLARD	PALMO 200/ S3 / C7
Diameter of cylinder	D= 194 mm
Thickness of cylinder	(Fe360) 3.2mm
Stroke of cylinder	(PALMO200/3/C7) 700mm (PALMO200/3/C5) 500mm
Finishing of cylinder	Powder paint standard antracite grey
Resistance to breaking through	90.000 J
Resistance to impact (without deformations)	5.000 J
