

Software (Access Control + Time & Attendances + Patrol)

Contactless Cards Management System is a sophisticated access control and alarm management software. It centralizes security requirements within all types of installation irrespective of their complexity. Large installations can rely on the power of ACCESS 2000 to monitor tens of thousands of cardholders and hundreds of controllers, in multi-sites applications. Database mirroring, system redundancy and import/export of databases increase the system efficiency and security.

Access Control with Multiple Functions. In addition to standard access control features (time zones, access levels, etc.), **Contactless Cards Management System** offers many built-in functions: numerous levels of password protection, anti-passback (local, global, and timed), interlock, counters, message on the controller display, etc...

Security is reinforced as alarm conditions, events and schedule automatically trigger predefined actions, processes and global reflexes.

All actions are available to be sequenced within processes and incorporated into global reflexes, triggered upon predefined events (access, alarm and schedule). Examples: flashing icons, visual or audible instructions, command sent to com port, external applications executed, report printed or exported, any programmed relay activation, arm/disarm alarm zones, card invalidation, etc...

Personalized Reports Wizard: **Contactless Cards Management System** incorporates a powerful report user-friendly wizard for generation, update and export of personalized reports, all in widely used existing formats. Reports are compiled from the journal or from the system database.

Modules

- Access Control
- Time & Attendance: T&A reports show how long cardholders have spent on the site. It eases the calculation of individual or groups of employees' daily and total hours, over a definable period. The employees' transactions can easily be exported to external T&A applications.

Guard Patrol Program: A guard patrol tool checks the appropriate arrival of a guard at specific checkpoints within predefined deadlines.

Main features

- Real time monitoring of movements and alarms
- Up to 100,000 card holders
- Compatible with WIEGAND controllers: ACC301, ACC304
- Compatible Windows 98/2000/ME/NT/XP
- Wizard
- Visual identification
- Real time monitoring of movements and alarms
