

STOP your barrier from hitting people and vehicles

Avoid litigation from the injuries and damage caused

SmartGate® is the **Solution**

IMPORTANT QUESTIONS

Will SmartGate positively stop my barriers from hitting people and vehicles?

Can SmartGate virtually eliminate my liability exposure by creating safer gateways for our employees and visitors?

Is SmartGate the only non-contact safety system that moves with the gate arm, has no beams, lenses or out-put devices to maintain, yet "sees" both people and vehicles?

SmartGate[®] is the Solution

Setting a New Standard in Safety

For many years the parking and traffic control industry ...“You”... have accepted the damage and expenses associated with gate strikes as an unavoidable cost of doing business. In many cases the claims handling mechanisms, developed over time, are so efficient that the real costs and negative effects, of gate or barrier strikes are not apparent to top management. The damage, the strike and the liability exposure are very real. Real enough to cause you to resort to simple rubber pads and warning signs, in an attempt to reduce the gravity of these strikes. Ask your colleagues about barrier and gate damage lawsuits - pads and signs can actually be seen as an admission of the high risk barrier gates represent.

No contact means no problem

SmartGate is a no contact safety system that alerts the barrier to stop and reverse long before a strike can occur.* With SmartGate installed, barrier strikes are not an issue, damage claims become a bad memory, and unnecessary legal expenses are virtually eliminated.

Invisible Safety Field

SmartGate is easy to understand

The SmartGate system creates an “invisible field™” surrounding the barrier arm. The field moves with the arm providing the best possible safety sensing. The SmartGate field not only “sees” vehicles, it also “sees” people, something ground loops can never do. When a vehicle or person is detected your barrier is alerted to stop and reverse, in plenty of time to avoid the arm dropping on to the sensed object. And best of all; SmartGate has no light beams to keep aligned and clean, no bulbs or emitters to burn out, and no expensive in-the-ground installation.

Installation is easy

The SmartGate system can usually be installed in 30 to 60 minutes by anyone familiar with the electronics of parking barriers. Common hand tools and a drill are all that is needed.

SmartGate is cost effective

At about the same cost of one bent power antenna and scratched car, probably much less than a hospital visit, and definitely less than fighting a lawsuit. SmartGate pays for itself!
