

Features

Door opening trigger and vehicle presence detection
Two-in-one solution: open doors and ensure safety with just one detector

Wireless Communication
Information between the magnetic detector and the receiver is transmitted via a wireless connection

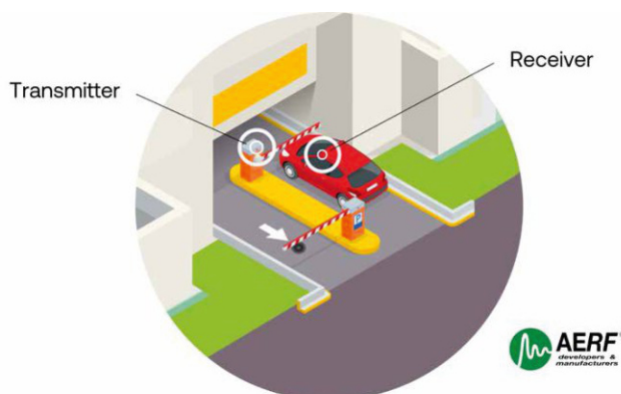

Easy and intuitive programming
Configuration is simplified through receiver-based option selection, enabling efficient startup and operation

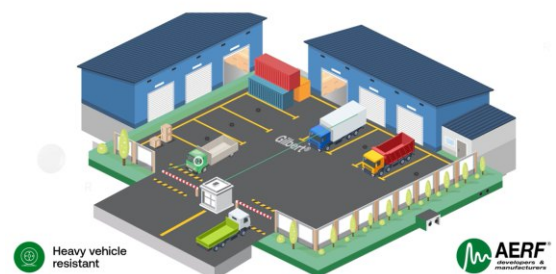

Low Battery Notification
The receiver provides a low battery warning before complete battery depletion

Application sector

Interaction functionality in communities or residential buildings

Optimized control of barriers and industrial accesses

Solution for parking lots in public areas

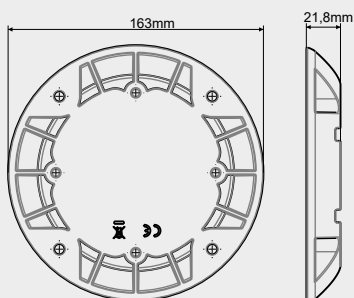

Versions

Gilbert Surface

Residential areas
and/or buildings

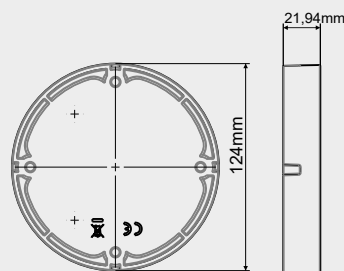

This easy-to-install version is ideal for private or commercial traffic areas, offering reliable performance with no risk of obstruction

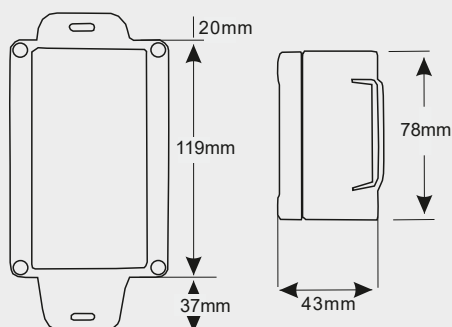

Gilbert Insert

High-volume zones
with heavy-duty
vehicle traffic

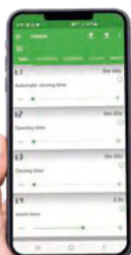

The Insert solution is designed to eliminate any potential obstruction to vehicle or pedestrian traffic. Ideal for parking lots, loading docks, or industrial facilities

Receptor

- Power Supply: Magnetic detector transmitter - 2x3.6 AA lithium
Receiver - 12/24VAC/ DC (wiring in door)
- Distance between transmitter and receiver: 50 meters
- Vehicle detection range: 0.5 meters
- Number of detectors per receiver/door: 7 devices
- Battery life: 4 years
- Working temperature: -20°C to 85°C
